SCOPE OF WORK

MIXED USE DEVELOPMENT VIDEO

RFP No. 05-163

This program is designed for the consultant to work with WRCOG, local jurisdictions, the development community and other interests to develop a high-quality broadcast video that promotes the possibilities of higher-density and mixed-use developments for future construction in Western Riverside County. Technical assistance will be provided to support local government efforts to remove obstacles and facilitate the market for higher-density, mixed-use development. The intent of the broadcast video will be for extensive public outreach, focusing on educating elected officials, stakeholder organizations, and the community about the benefits of in-fill and mixed use development in the WRCOG region as it experiences significant growth during the next twenty years. Responses to this request should provide a schedule that demonstrates completion of all work by June 30, 2005.

Previous Work Completed

WRCOG received grant funding from the State Department of Housing & Community Development in 2001 to form the SR-91 Inter-Regional Partnership (IRP) with the Orange County Council of Governments. The purpose of the IRP was to address the imbalance of jobs and housing that has developed between the two counties over the past 10 years. As a result of its work, strategic initiatives on infill and mixed use development were created to address and possibly help mitigate the impacts of the existing imbalance on congestion along the SR-91 Corridor.

A Tool Kit was prepared by the Interregional Partnership (IRP) that provides information on how cities and counties can implement well-planned mixed-use development. The Tool Kit guides jurisdictions through the initial stages of identifying, planning and implementing mixed use projects in their jurisdictions. A complimentary video and PowerPoint presentation identifies the need for in-fill and mixed-use development, and provides examples of successful projects.

WRCOG, through its member agencies, interested parties including the KB Home Community Advisory Board which is comprised of Inland Empire leaders representing government, education, business, and environment desires to continue to build on these efforts, in partnership with the development community and other interests, to create a media approach that can promote mixed-use and higher-density alternatives and at the same time “de-bunk” many of the negative perceptions that are sometimes held by certain community interests.

Scope of Work

Task 1. Research and Background Preparation

The consultant will conduct background research by reviewing the products developed as part of the previous Inter-regional Partnership work conducted by WRCOG in conjunction with the San Diego Association of Governments and with the Orange County Association of Governments. The consultant will also research the extent of previous similar outreach efforts and activities

undertaken – specifically focused on video production – elsewhere in California and beyond. A memorandum on the nature, cost, and results of these efforts will be presented.

Task 1 Deliverable: Memorandum on the nature, cost, and results of any similar activities performed in California and elsewhere.

Task 2. Formulate Approach and Script for WRCOG video

The consultant will work with the WRCOG staff, staff and elected official representatives from member agencies, members of the KB Home Community Advisory Board, and other interests to review findings identified in Task 1 and to develop an outline of topics to be addressed in the video product.

Task 2 Deliverable: Memorandum explaining the process used and the development of the video outline.

Task 3. Develop Public Outreach Program Video

The consultant will work with WRCOG Staff and the above-mentioned interest to coordinate the production of the video.

Task 3 Deliverable: Multiple copies (number to be determined based on development of final project budget) of broadcast video. Listing of regional cable providers and description of process to be used for getting “airtime” for video.

Task 4 Develop Final Report and Recommendations

The consultant will provide a final report detailing the steps and processes used towards developing the final product.

Task 4 Deliverable: Final Report summarizing the approach taken to Tasks 1-3 above, including detail regarding research, workshops, technical assistance and public outreach that were used throughout the process.

Deliverables for Tasks 1 through 4 are to be completed by the end of 10 week contract period.

CONTRACT BUDGET EXPLANATORY INFORMATION

The sample line item budget on the following page reflects the most common format used to present budget or compensation information in contracts for planning services. Under this format, the consultant is compensated for costs, plus given a fixed fee.

All consultant (and subconsultant) costs must be allowable and consistent with Federal cost principles under OMB Circular A-87. Please be aware that the cost-plus-a-percentage-of-cost bid method, where the consultant's profit is a percentage of the reimbursed costs on a project, is not allowed under Federal rules.

In reviewing the sample line item budget, the following should be considered:

- Under direct labor, it is preferable to identify professional staff by both name and position.
- Direct labor and fringe benefits must be shown as separate dollar amounts.
- Contingency fees are not allowed.
- The salary rate quoted should be the highest rate of compensation the staffer/position is expected to receive during the life of the contract. Expected merit or cost-of-living increases should be incorporated into the quoted rate.

All consultants must prepare and submit a line item budget using the exact format shown on the following page, or may risk having their proposal disqualified. Furthermore, any subconsultant whose portion of the work is \$25,000 or more must also prepare and submit their own line item budget as part of the proposal.

Title 49: Transportation

PART 26—PARTICIPATION BY DISADVANTAGED BUSINESS ENTERPRISES IN DEPARTMENT OF TRANSPORTATION FINANCIAL ASSISTANCE PROGRAMS

Subpart F—Compliance and Enforcement

Appendix A to Part 26—Guidance Concerning Good Faith Efforts

I. When, as a recipient, you establish a contract goal on a DOT-assisted contract, a bidder must, in order to be responsible and/or responsive, make good faith efforts to meet the goal. The bidder can meet this requirement in either of two ways. First, the bidder can meet the goal, documenting commitments for participation by DBE firms sufficient for this purpose. Second, even if it doesn't meet the goal, the bidder can document adequate good faith efforts. This means that the bidder must show that it took all necessary and reasonable steps to achieve a DBE goal or other requirement of this part which, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to obtain sufficient DBE participation, even if they were not fully successful.

II. In any situation in which you have established a contract goal, part 26 requires you to use the good faith efforts mechanism of this part. As a recipient, it is up to you to make a fair and reasonable judgment whether a bidder that did not meet the goal made adequate good faith efforts. It is important for you to consider the quality, quantity, and intensity of the different kinds of efforts that the bidder has made. The efforts employed by the bidder should be those that one could reasonably expect a bidder to take if the bidder were actively and aggressively trying to obtain DBE participation sufficient to meet the DBE contract goal. Mere *pro forma* efforts are not good faith efforts to meet the DBE contract requirements. We emphasize, however, that your determination concerning the sufficiency of the firm's good faith efforts is a judgment call: meeting quantitative formulas is not required.

III. The Department also strongly cautions you against requiring that a bidder meet a contract goal (i.e., obtain a specified amount of DBE participation) in order to be awarded a contract, even though the bidder makes an adequate good faith efforts showing. This rule specifically prohibits you from ignoring *bona fide* good faith efforts.

IV. The following is a list of types of actions which you should consider as part of the bidder's good faith efforts to obtain DBE participation. It is not intended to be a mandatory checklist, nor is it intended to be exclusive or exhaustive. Other factors or types of efforts may be relevant in appropriate cases.

A. Soliciting through all reasonable and available means (e.g. attendance at pre-bid meetings, advertising and/or written notices) the interest of all certified DBEs who have the capability to perform the work of the contract. The bidder must solicit this interest within sufficient time to allow the DBEs to respond to the solicitation. The bidder must determine with certainty if the DBEs are interested by taking appropriate steps to follow up initial solicitations.

B. Selecting portions of the work to be performed by DBEs in order to increase the likelihood that the DBE goals will be achieved. This includes, where appropriate, breaking out contract work items into economically feasible units to facilitate DBE participation, even when the prime contractor might otherwise prefer to perform these work items with its own forces.

C. Providing interested DBEs with adequate information about the plans, specifications, and requirements of the contract in a timely manner to assist them in responding to a solicitation.

D. (1) Negotiating in good faith with interested DBEs. It is the bidder's responsibility to make a portion of the work available to DBE subcontractors and suppliers and to select those portions of the work or material needs consistent with the available DBE subcontractors and suppliers, so as to facilitate DBE participation. Evidence of such negotiation includes the names, addresses, and telephone numbers of DBEs that were considered; a description of the information provided regarding the plans and specifications for the work selected for subcontracting; and evidence as to why additional agreements could not be reached for DBEs to perform the work.

(2) A bidder using good business judgment would consider a number of factors in negotiating with subcontractors, including DBE subcontractors, and would take a firm's price and capabilities as well as contract goals into consideration. However, the fact that there may be some additional costs involved in finding and using DBEs is not in itself sufficient reason for a bidder's failure to meet the contract DBE goal, as long as such costs are reasonable. Also, the ability or desire of a prime contractor to perform the work of a contract with its own organization does not relieve the bidder of the responsibility to make good faith efforts. Prime contractors are not, however, required to accept higher quotes from DBEs if the price difference is excessive or unreasonable.

E. Not rejecting DBEs as being unqualified without sound reasons based on a thorough investigation of their capabilities. The contractor's standing within its industry, membership in specific groups, organizations, or associations and political or social affiliations (for example union vs. non-union employee status) are not legitimate causes for the rejection or non-solicitation of bids in the contractor's efforts to meet the project goal.

F. Making efforts to assist interested DBEs in obtaining bonding, lines of credit, or insurance as required by the recipient or contractor.

G. Making efforts to assist interested DBEs in obtaining necessary equipment, supplies, materials, or related assistance or services.

H. Effectively using the services of available minority/women community organizations; minority/women contractors' groups; local, state, and Federal minority/women business assistance offices; and other organizations as allowed on a case-by-case basis to provide assistance in the recruitment and placement of DBEs.

V. In determining whether a bidder has made good faith efforts, you may take into account the performance of other bidders in meeting the contract. For example, when the apparent successful bidder fails to meet the contract goal, but others meet it, you may reasonably raise the question of whether, with additional reasonable efforts, the apparent successful bidder could have met the goal. If the apparent successful bidder fails to meet the goal, but meets or exceeds the average DBE participation obtained by other bidders, you may view this, in conjunction with other factors, as evidence of the apparent successful bidder having made good faith efforts.

DEMONSTRATION OF GOOD FAITH EFFORTS

When the contract goal was not attained, or when partial goals have been attained, the bidder/offeror shall submit the requested information below for a determination of good faith efforts.

METADATA REQUIREMENTS

Spatial Data/Metadata Requirements

The following are fields required for documentation of data received by SCAG. The metadata documentation follows that presented in FGDC-STD-001-1998 “Content Standard for Digital Geospatial Metadata,” commonly referred to as the FGDC standard.

A number of these metadata fields require prior consideration between SCAG and contractors before data acquisition or collection begins. These are:

1.4.1 Progress

SCAG requires that a contractor indicate the anticipated progress of all datasets upon project completion. Explanations should be prepared for any datasets that are not complete at the close of the contract.

1.7 Access Constraints

Any anticipated constraints on access to datasets need to be documented and agreed to by SCAG before data collection or acquisition begins. Any licensing requirements should be spelled out here.

1.8 Use Constraints

Any anticipated constraints on use of data sets need to be documented and agreed to by SCAG before data collection or acquisition begins. Any licensing requirements should be spelled out here.

1.12.2 Security Classification

Any anticipated sensitivities of the data set or security implications of the dataset need to be documented and agreed to by SCAG before data collection or acquisition begins. This applies to general sensitivity issues and not strictly national security classification systems. For example, SCAG needs to know that the data being collected is sensitive to the extent that it should not be displayed at large scales on the Internet.

1.13 Native Data Set Environment

The data set format needs to be documented and agreed to by SCAG before data collection or acquisition begins. SCAG works primarily with standard ESRI formats like shapes and coverages.

2.1.2.1 Attribute Accuracy Value

The accuracy of attributes needs to be documented and agreed to by SCAG before data collection or acquisition begins. For example, if elevations are being collected SCAG needs to be informed that they will be plus or minus 50 feet.

2.4.1.2.1 Horizontal Positional Accuracy Value

The horizontal positional accuracy needs to be documented and agreed to by SCAG before data collection or acquisition begins. For example, if point locations are being recorded from a GPS receiver, SCAG needs to be aware that 90% of the points are within 30 meters of true ground position.

2.5.1.4.1 Source Currentness Reference

SCAG needs to be informed if the currentness reference is not ground condition. The currentness reference is the bases on which the time period content is determined. The date of the data set can be based on a number of things like publication date, release date, or delivery date. An example would be the 2000 Thomas Brothers centerline file. The date usually associated with this file is the year indicated on the “Thomas Guide” that the digital data was used to create. It is much more likely that the data actually represents some time in 1999, since the books came out in time for Christmas 1999. The currentness reference in this case could be Thomas Guide title date.

4.1 Horizontal Coordinate System Definition

SCAG needs to know and agree to the data projection. It would be very unusual to accept a projection that does not have standard parameters. Data will most often be required in North American Datum 1983 UTM zone 11. The parameters for this projection are:

Projection: Transverse Mercator

Parameters

False Easting 500000.0000000

False Northing: 0.0000000

Central Meridian: -117.0000000

Scale_Factor: 0.999600000

Latitude of Origin: 0

Linear Unit: Meter (1.000)

Geographic Coordinate System:

Name: GCS_North_American_1983

Angular Unit: Degree (0.017453292519943295)

Prime Meridian: Greenwich (0.000000000000)

Datum: D_North_American_1983

Spheroid: GRS_1980

Semimajor Axis: 6378137.0000000000000

Semiminor Axis: 6356752.314140356100

Inverse Flattening: 298.2572221010000200

SCAG also requires all codes used in any spatial data set to be provided in an agreed upon electronic format.

The FGDC standard for data documentation is a very complete standard covering every kind of spatial data. What follows are the items for metadata documentation in datasets typically received at SCAG. Generally SCAG receives data pertaining to phenomena on the earth's surface in a vector form of points, lines, or polygons. Other types of data, which might include such forms as raster data and imagery data or some theme as subsurface water depth, would require reconsideration of some of the specific items required. Generally the types of metadata information outlined at the first and second levels below are required of all data.

The outline numbers are from FGDC-STD-001-1998 "Content Standard for Digital Geospatial Metadata." The actual fields that require in input are underlined

A dataset for example may be classified “may be inappropriate for display on Internet at large scales.” These evaluations are for security concerns not data quality concerns. (Required)
